

CRO Predict is a prediction market maker GameFi on the Cronos Chain, it's a play-to-earn **(predict-to-earn)** GameFi. Users will be able to predict various cryptos and earn CRP rewards after winning. Predict crypto prices, sports games and gain experience in the arena, as well as earning rewards while at it.

Prediction GameFi

Every week users can predict on 5 different coins on CRO Predict using CRP. Each coin has only 10 seats to accept predictions and each prediction costs 10 CRP, you can only predict once from one wallet. (This means only 50 seats available in total per week and 500 CRP retrieved). Those who try to predict after seats are filled will be unsuccessful and have to try again next week.

A position will open on Monday 13:00 UTC, and users can secure their seats by choosing either Bull or Bear (Up or Down). On Friday 13:00 UTC the positions closes, it's also worthy to note that the percentage of those who chose Up or Down will already be visible for the world to see. The ones with the right predictions will be redirected to stake CRP to earn CRP at a very high APR, while the ones who predicted wrongly will be redirected to stake CRP to earn CRO at a very high APR. Only the wallets they predicted with can stake.

The Predict Pool V1

The CRP (Predict Pool) APR would be so high that winners of the prediction should be able to get almost double of their CRP staked for that week. Yes, new week, new predict pools and you have to win your prediction to gain access for that week. Maximum stake per wallet is 1000 CRP.

The CRO (Predict Pool) would be $\frac{1}{5}$ of the APR of the CRP (Predict Pool). Meaning if the CRP pool starts at 100,000% APR, the CRO Pool would start at 20,000%. However, keep in mind that APRs can fluctuate depending on how many losers we have for that week and how much CRP were staked.

The CRO is a compensation to losers as we thank them for participating and keep trying. Maximum stake per wallet is also 1000 CRP. Now you may ask, how are we getting the CRO for losers? The CRO needed for the first month will be gotten through the IDO. However, welcome the Predict Bid.

The Predict Bid

We reckon the 50 seats will always be filled within seconds, because let's face it, anyone who got a seat will get value. And you can use several wallets to predict and secure your seats to increase your chances of earning more.

To give more people a chance, every month one user stand a chance to gain access to the main CRP (Predict Pool). All they need to do is bid with CRO, just like an auction. The highest bidder will be able to gain access to the Pool for a whole month (4 weeks).

The CRO the user bids with will be retrieved by us, while others with lower bids can safely withdraw their CRO and try again the next month.

The total capped supply of \$CRP is 1,000,000 making it a deflationary digital currency.

Total Capped Supply
1,000,000

Initial Supply
250,000

20%
(200,000) for ICO.

5%
(50,000) Initial
Liquidity.

Remaining
750,000

50% (500,000) earned through Prediction pools for a long period.

15% (150,000) locked as reserve.

10% (100,000) allocated to the team for further promotion/marketing.

Roadmap

Phase

1

- Development of Site/DApp
- Development of CRP Token
- ICO

Phase

2

- Price Prediction launched
- Sports Prediction launched
- Metaverse/NFT

Phase

3

- List on major exchanges
- Global adoption
- More community development
