

CRO Predict is a prediction market maker GameFi on the Cronos Chain, it's a play-to-earn **(predict-to-earn)** GameFi. Users will be able to predict various cryptos and earn CRP rewards after winning. Predict crypto prices, sports games and gain experience in the arena, as well as earning rewards while at it.

## Prediction GameFi

Every week users can predict on 5 different coins on CRO Predict using CRP. Each coin has only 10 seats to accept predictions and each prediction costs 10 CRP, you can only predict once from one wallet. (This means only 50 seats available in total per week and 500 CRP retrieved). Those who try to predict after seats are filled will be unsuccessful and have to try again next week.

A position will open on Monday 13:00 UTC, and users can secure their seats by choosing either Bull or Bear (Up or Down). On Friday 13:00 UTC the positions closes, it's also worthy to note that the percentage of those who chose Up or Down will already be visible for the world to see. The ones with the right predictions will be redirected to stake CRP to earn CRP at a very high APR, while the ones who predicted wrongly will be redirected to stake CRP to earn MMF at a very high APR. Only the wallets they predicted with can stake.

## The Predict Pool

The CRP (Predict Pool) APR would be so high that winners of the prediction should be able to get almost double of their CRP staked for that week. Yes, new week, new predict pools and you have to win your prediction to gain access for that week. Maximum stake per wallet is 1000 CRP.

The MMF (Predict Pool) would be  $\frac{1}{5}$  of the APR of the CRP (Predict Pool). Meaning if the CRP pool starts at 100,000% APR, the MMF Pool would start at 20,000%. However, keep in mind that APRs can fluctuate depending on how many losers we have for that week and how much CRP were staked.

The MMF is a compensation to losers as we thank them for participating and keep trying. Maximum stake per wallet is also 1000 CRP.

The total capped supply of \$CRP is 1,000,000 making it a deflationary digital currency.

**Total Capped Supply**  
**1,000,000**

**Initial Supply**  
**250,000**

**20%**  
(200,000) for ICO.

**5%**  
(50,000) Initial  
Liquidity.

**Remaining**  
**750,000**

**50%** (500,000) earned through Prediction pools for a long period.

**15%** (150,000) locked as reserve.

**10%** (100,000) allocated to the team for further promotion/marketing.

# Roadmap

## Phase

1

- Development of Site/DApp
- Development of CRP Token
- ICO

## Phase

2

- Price Prediction launched
- Sports Prediction launched
- Metaverse/NFT

## Phase

3

- List on major exchanges
- Global adoption
- More community development
